Question 1. How to Connect A Network Printer in Windows (7/8/10 version) with Wifi/Cable-network Configuration. How to add IP or Network Printer on Windows? Please share you printer between two or multiple computers.

Must be following this step. which is given below:

a) steps/processes

b) Methodology (Hardware/Software or Both)

c) Result

Answer.

There are fifteen steps for adding a network printer in windows. The steps are including adding IP or network printer. The steps are given below:

step 1: Have to click the start menu.
step 2: Then click the control panel.
step 3: Click hardware and sound.
step 4: Then have to go to device and printers.
step 5: Then click add a printer on the top of the screen.
step 6: Add a network, wireless or bluetooth printer for adding network printer.
step 7: Create a new port
step 8: In the drop down option click standard TCP/IP port.
step 9: Click next.
step 10: Putting IP address.
step 11: Putting port number.
step 12: Click next.
step 13: Install printer driver.
step 14: Click next.
step 15: Type a printer name.

After the step we will see a window of if i need to share my printer.

I. Click "share this printer so that others on my network can find and use it".

Methodology: In this procedure we need some components these are -

I. Host computer
II. Cable or wireless card
III. Network printer.

These are the functions we need.

The software requirements are:
I. Windows
II. Driver for the printer.

Result: After maintaining the above steps we can configure a printer in our network and add it to our
host computer. Also we would be able to add printer IP and share our printer with our other computers.
